

Tax & Business Alert

AUGUST 2021

KNOW THE NUANCES OF THE NANNY TAX

During the pandemic, more than a few families have hired household workers while schools in many areas have gone virtual and some day care centers have had limited availability. If you've done so, be sure you know the nuances of the "nanny tax."

WITHHOLDING TAXES

For federal tax purposes, a household worker is anyone who does household work for you and isn't an independent contractor. Common examples include housekeepers, child care providers and gardeners.

If you employ such a person, you aren't required to withhold federal *income taxes* from the individual's pay unless the worker asks you to and you agree. In that case, he or she would need to complete a Form W-4. However, you may have other withholding and payment obligations.

You must withhold and pay Social Security and Medicare taxes (FICA) if your worker earns cash wages of \$2,300 or more (excluding food and lodging) during 2021. If you reach the threshold, all wages (not just the excess) are subject to FICA.

However, if your worker is under 18 and child care isn't his or her principal occupation, you don't have to withhold FICA taxes. Therefore, if your worker is really a student/part-time babysitter, there's no FICA tax liability.

Both employers and household workers need to pay FICA. Employers are responsible for withholding the worker's share and must pay a matching employer amount. FICA tax is divided between Social Security and Medicare. Social Security tax is 6.2% for both the employer and the worker (12.4% total). Medicare tax is 1.45% each for both the employer and the worker (2.9% total). If you prefer, you can pay your worker's share of Social Security and Medicare taxes, instead of withholding it from pay.

REPORTING AND PAYING

You pay nanny tax by increasing your quarterly estimated tax payments or increasing withholding from your wages rather than making an annual lump-sum payment. You don't have to file any employment tax returns — even if you're required to withhold or pay tax — unless you own a business. Instead, your tax professional will report employment taxes on Schedule H of your individual Form 1040 tax return.

THE FINER POINTS OF FUTA

If you hire a household worker and pay that person \$1,000 or more in cash wages (excluding food and lodging) in any calendar quarter of this year or last year, you must pay federal unemployment (FUTA) tax. This tax applies to the first \$7,000 of wages. The maximum FUTA tax rate is 6%, but credits reduce it to 0.6% in most cases. FUTA tax is paid only by the employer.

On your return, your employer identification number (EIN) will be included when reporting employment taxes. The EIN isn't the same as your Social Security number. If you need an EIN, you must file Form SS-4.

However, if you own a business as a sole proprietor, you must include the taxes for your worker on the FICA and federal unemployment tax forms (940 and 941) that you file for your business. You

use the EIN from your sole proprietorship to report the taxes. You also must provide your worker with a Form W-2.

A KEEN AWARENESS

Retaining a household worker calls for careful recordkeeping and a keen awareness of the applicable rules. Contact us for assistance complying with your nanny tax obligations. ■

5 KEY POINTS ABOUT BONUS DEPRECIATION

Like most business owners, you've probably heard about 100% bonus depreciation. It's available for a wide range of qualifying asset purchases. But there are many important details to keep straight. Here are five key points about this powerful tax-saving tool:

1. It's scheduled to phase out. Under current law, 100% bonus depreciation will be phased out in steps for property placed in service in calendar years 2023 through 2027. Thus, an 80% rate will apply to property placed in service in 2023, 60% in 2024, 40% in 2025, and 20% in 2026, and a 0% rate will apply in 2027 and later years.

For some aircraft (generally, company planes) and for the pre-January 1, 2027, costs of certain property with a long production period, the phaseout is scheduled

to take place a year later, from 2024 to 2028. Of course, Congress could pass legislation to extend or revise the above rules.

2. Bonus depreciation is available for new and most used property. In the past, used property didn't qualify. It currently qualifies unless the taxpayer previously used the property or unless the property was acquired in specific forbidden transactions. (These are, generally, acquisitions that are tax-free or from a related person or entity.)

3. Taxpayers should sometimes elect to turn it down. Taxpayers can elect to reject bonus depreciation for one or more classes of property. The election out may be useful for certain businesses. These include sole proprietorships and business entities taxed under the rules for partnerships and S corporations that want to prevent "wasting" depreciation deductions by applying them against lower-bracket income in the year property was placed in service — instead of against anticipated higher bracket income in later years. Note that business entities taxed as "regular" corporations (in other words, those that aren't S corporations) are taxed at a flat rate.

4. Bonus depreciation is available for certain building improvements. Before the 2017 Tax Cuts and Jobs Act (TCJA), bonus depreciation was available for two types of real property: 1) land improvements other than buildings, such as fencing and parking lots,

and 2) qualified improvement property, a broad category of internal improvements made to non-residential buildings after the buildings are placed in service.

The TCJA inadvertently eliminated bonus depreciation for qualified improvement property. However, the CARES Act of 2020 made a retroactive technical correction to the TCJA. The correction makes qualified improvement property placed in service after December 31, 2017, eligible for bonus depreciation.

5. 100% bonus depreciation has reduced the importance of Section 179 expensing.

If you own a smaller business, you've likely benefited from Sec. 179 expensing. This is an elective benefit that — subject to dollar limits — allows an immediate deduction of the cost of equipment, machinery, off-the-shelf computer software and some building improvements. Sec. 179 has been enhanced by the TCJA, but the availability of 100% bonus depreciation is economically equivalent and has greatly reduced the cases in which Sec. 179 expensing is useful. ■

STRESS TESTING YOUR INVESTMENT PORTFOLIO

Many banks conduct regular “stress” tests to predict the impact of adverse external events on their earnings, capital and loan portfolios. Banks use the results to shore up any revealed weaknesses. Investors should periodically perform similar stress tests on their investment portfolios.

Stress testing is the ultimate “what if” analysis. It uses modeling techniques to predict the impact of an economic downturn, financial crisis or any number of other “worst case” scenarios on your wealth. By analyzing this information, you can identify vulnerabilities in your financial plan and make changes to enhance its probability of success.

There's virtually no limit to the scenarios you can test. Common examples include extreme market volatility, a severe or prolonged bear market, increasing inflation, and rising interest rates. Think about current events, too. How would, say, a fuel crisis driven by a massive cyberattack affect your portfolio?

One useful exercise is to take the contents of your actual portfolio and calculate the outcome had you owned the identical investments on the eve of a historical financial crisis. Such testing can reveal potential weaknesses in your portfolio and help you pinpoint strategies to mitigate them.

For example, you might change the assumptions in your scenario analysis to see how your portfolio would respond if it were more heavily allocated to bonds rather than equities, or if it were more diversified by region, sector or other factors. While there are no guarantees, this type of stress testing can help you identify asset allocations that increase your probability of weathering various storms and ultimately meeting your financial goals.

Stress testing tends to focus on negative scenarios, but don't ignore the positive. Incorporating positive market developments in your scenario analysis — such as the resurgence of a struggling sector or improved stability in a volatile market — can help you ensure that you're invested in the right vehicles to maximize upside potential.

Of course, stress testing can tell investors only so much. During the recent pandemic, many stocks soared despite economic conditions that would suggest they'd be under greater downward pressure. So, talk with your financial advisors about the potential benefits — and limitations — of stress testing. The goal is to develop a resilient financial plan that's customized to your specific circumstances and goals. ■
